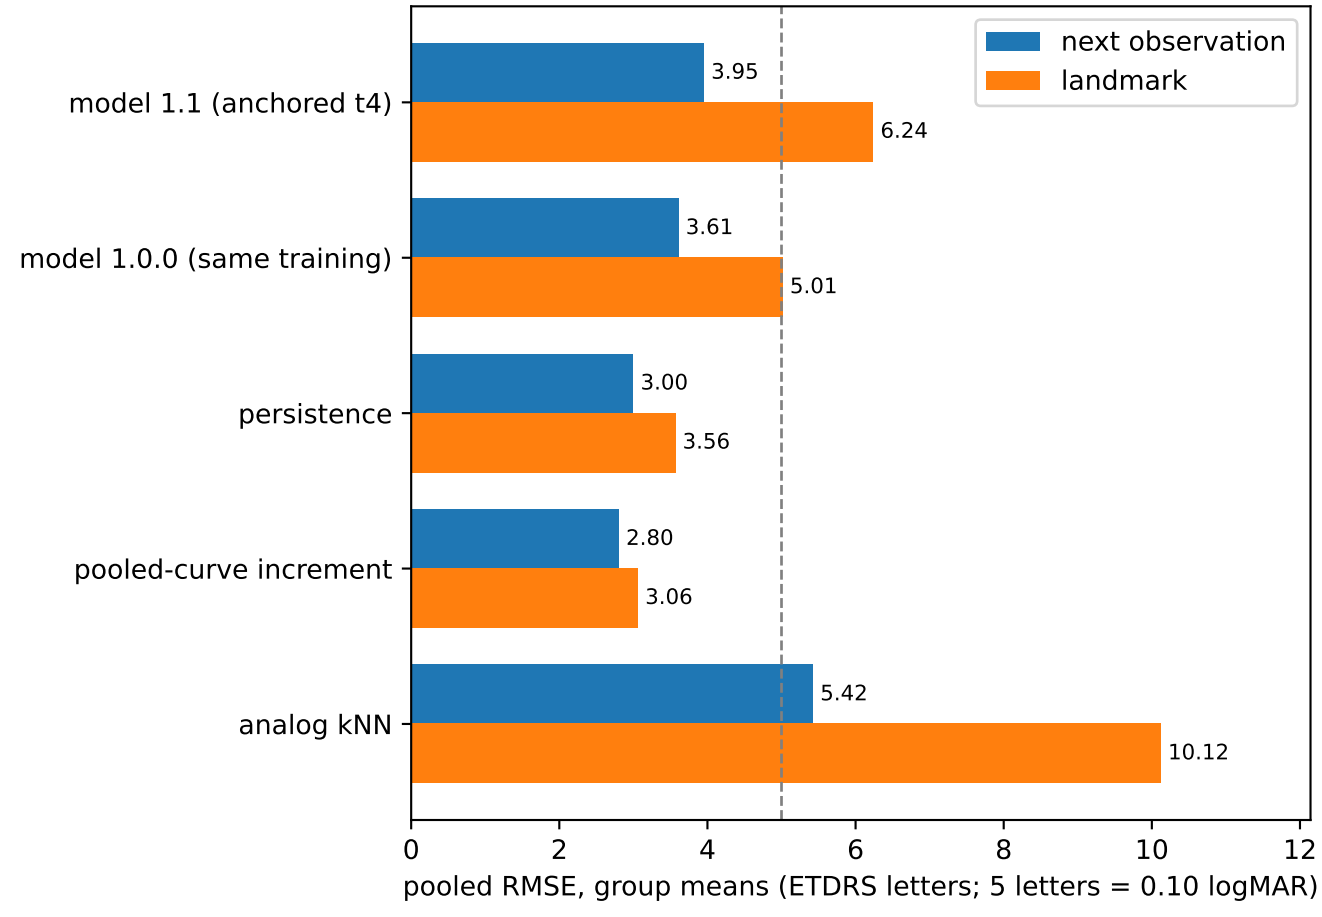
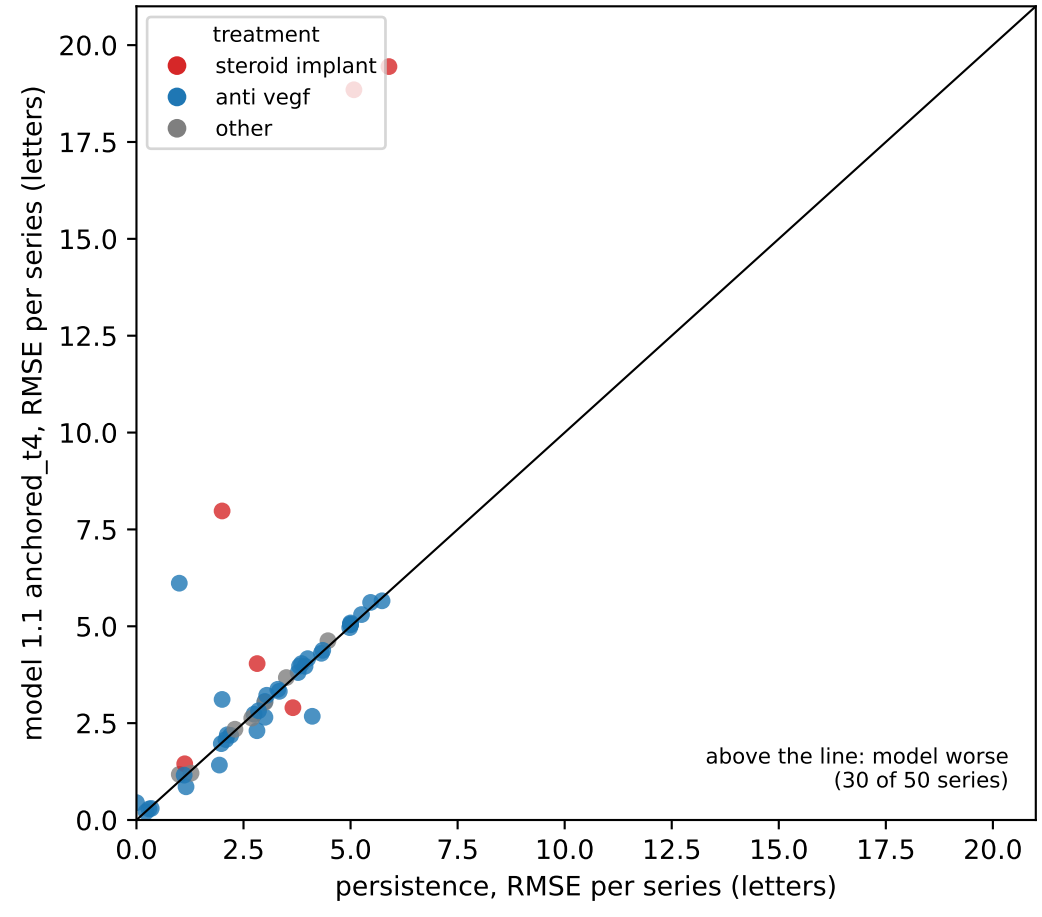
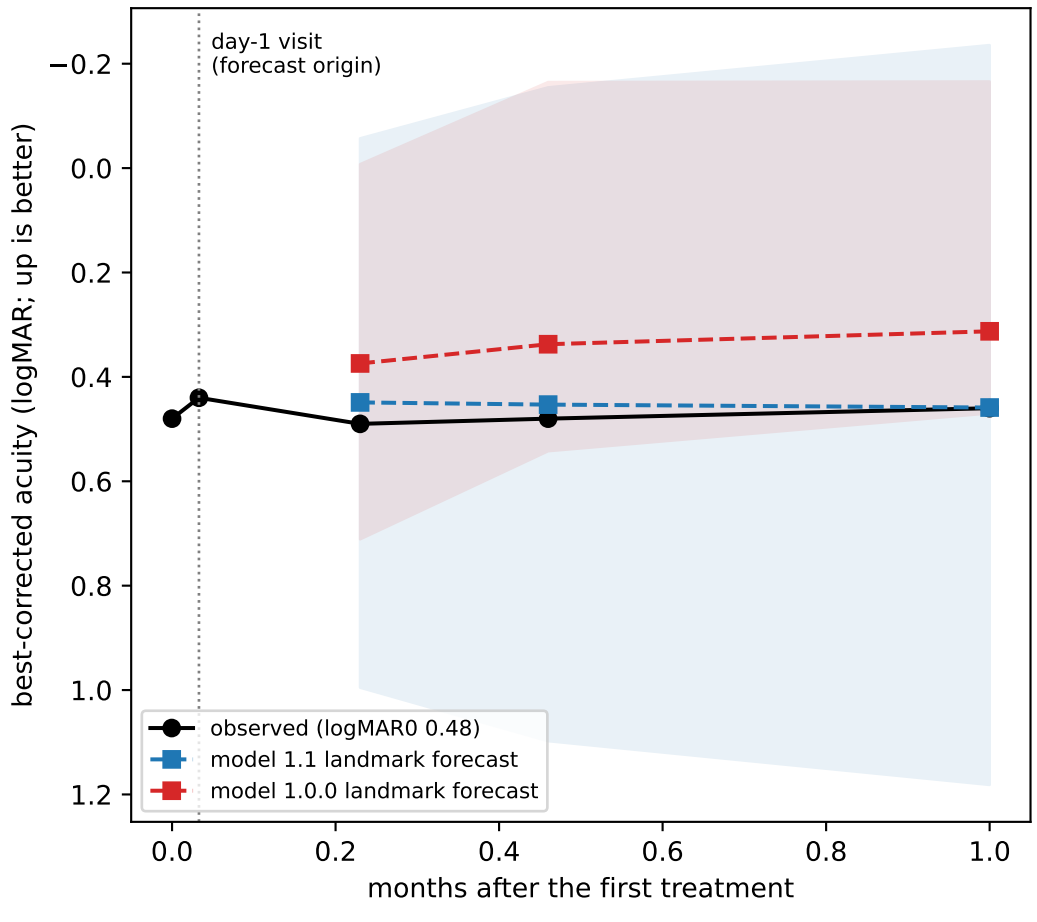
Sealed test, 50 group-mean series: H1 passes, H2–H5 fail
initial state 6.65 (1.0.0 6.52) vs pooled training curve 5.87 letters; 80% coverage 0.73

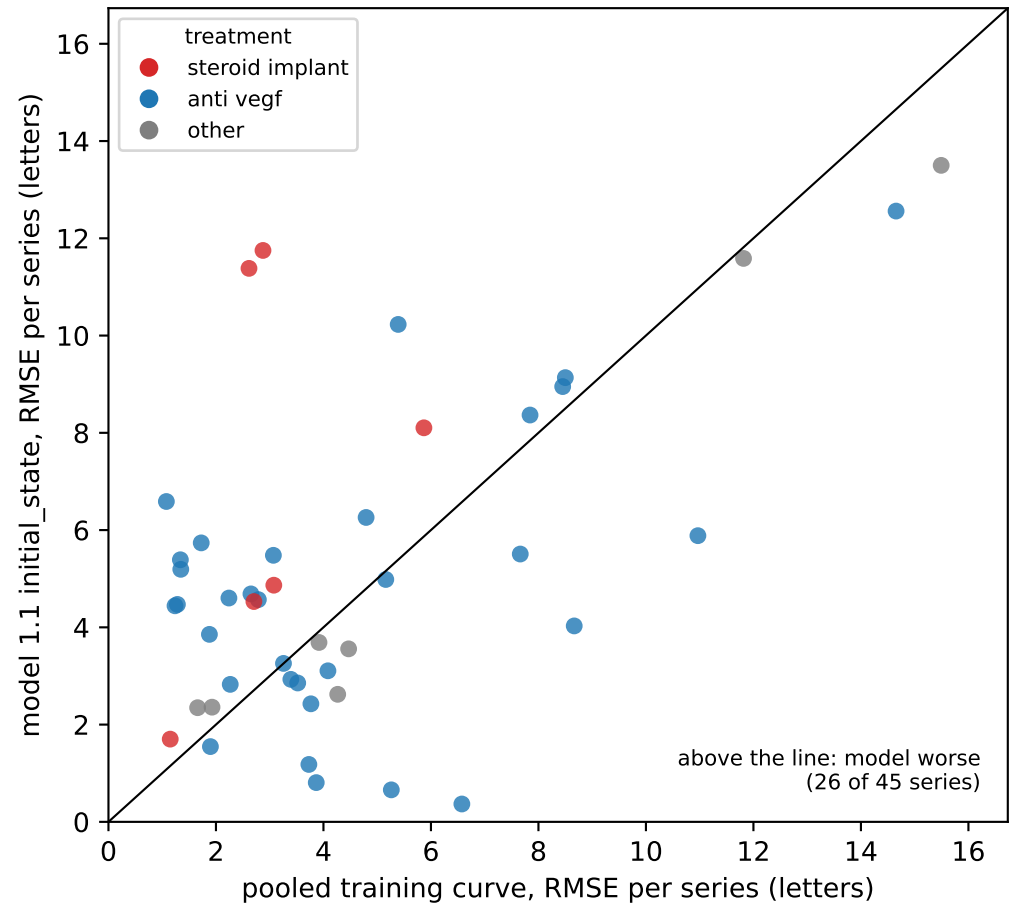


Landmark forecasts per group mean: the dexamethasone-implant
DME series (red) carry the largest model errors



nAMD, switch to brolucizumab (public study): from a day-1 visit
1.1 holds, 1.0.0 drifts (shaded: 90% intervals)





Initial state per control group mean: the context priors
do not beat one pooled training curve
