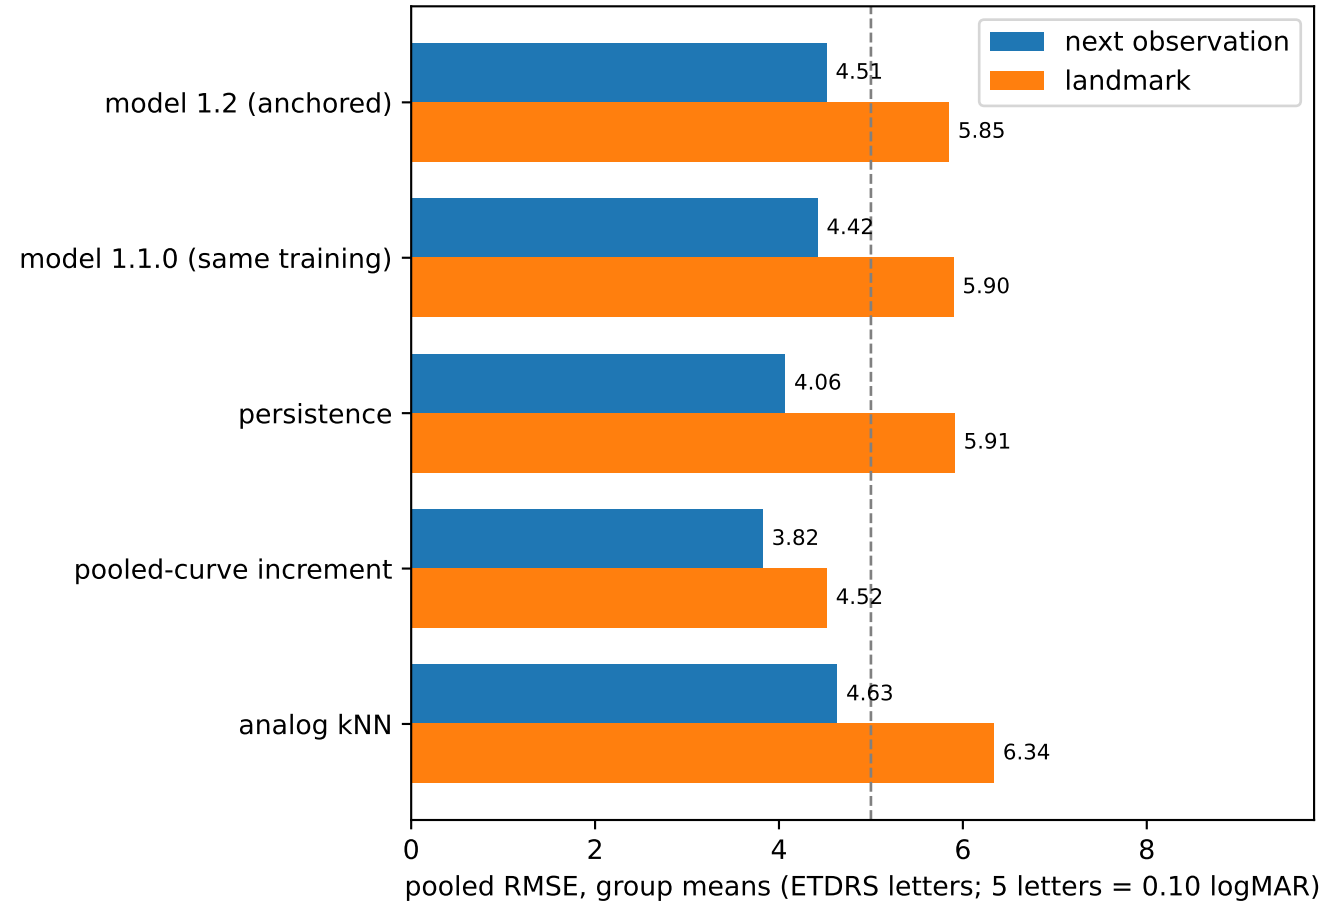
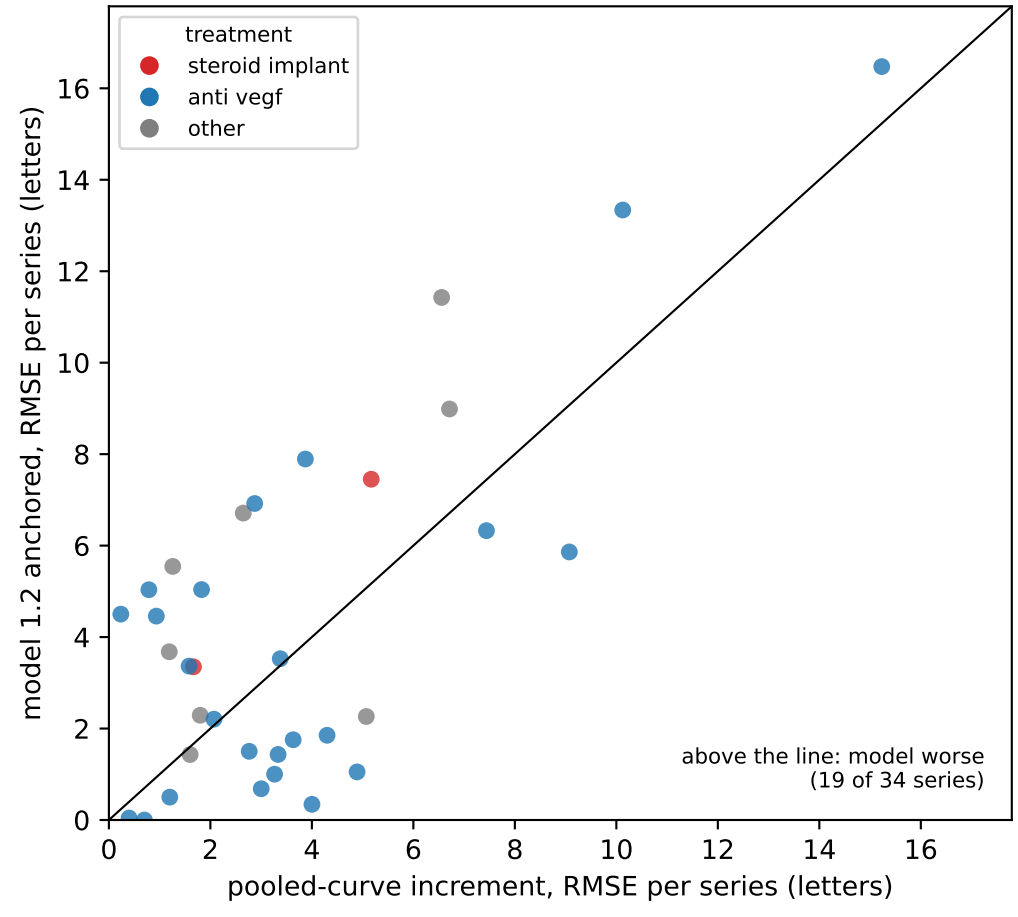
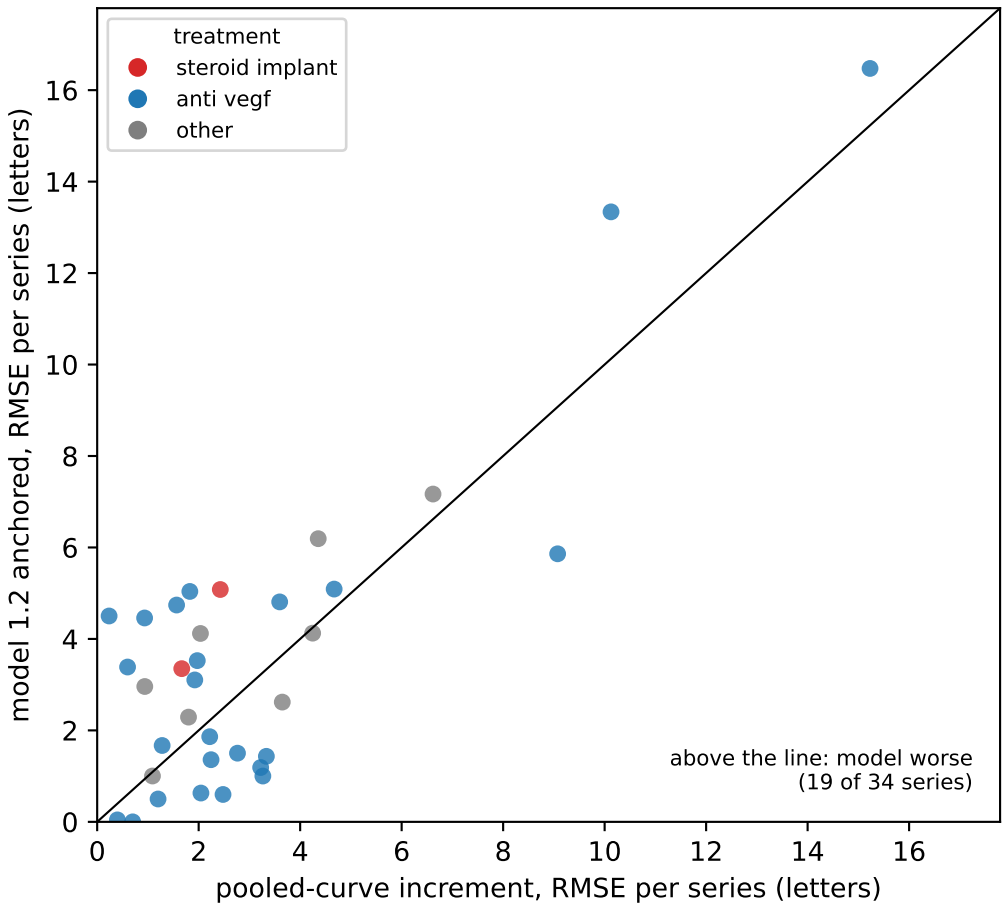
Sealed test, 34 group-mean series: all five checks fail
initial state 8.82 (1.1.0 8.88) vs pooled training curve 8.70 letters; 80% coverage 0.59

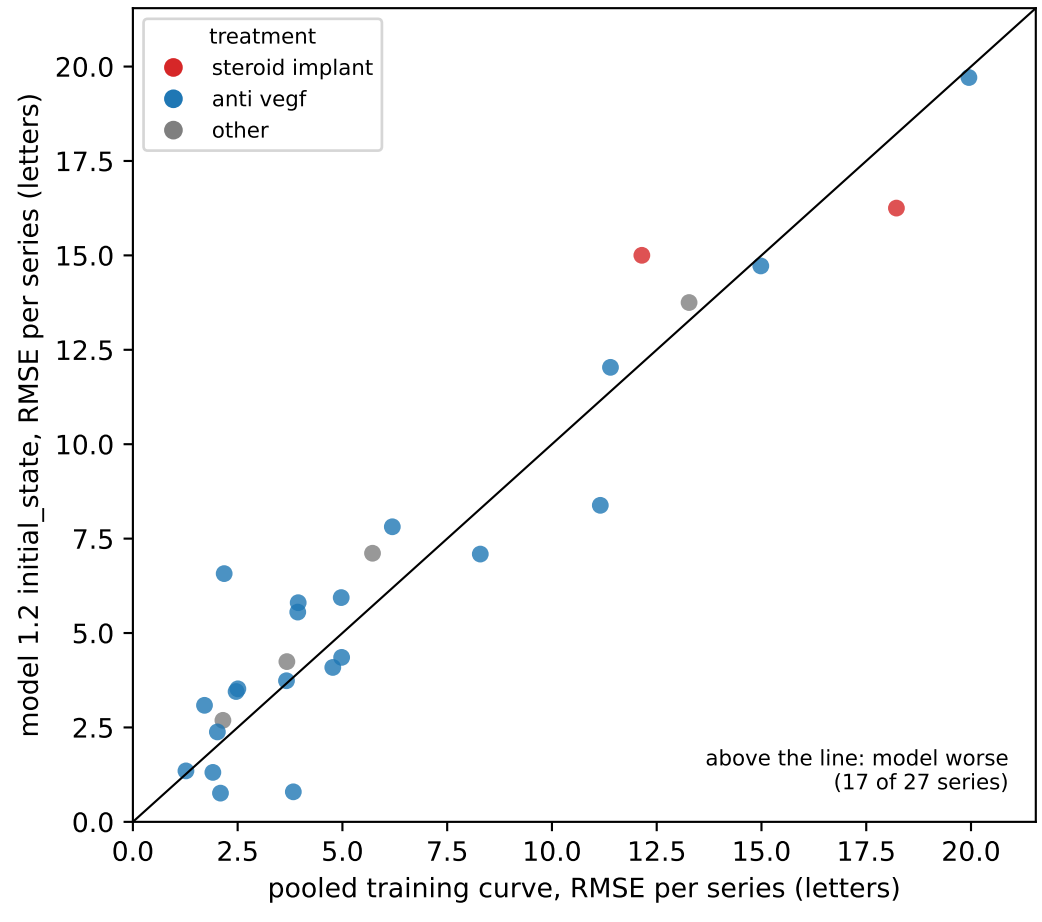


Landmark forecasts per group mean: the pooled-curve increment
is closer than the model (19 of 34 series)



Next-observation forecasts per group mean against
the pooled-curve increment





Initial state per control group mean: the context priors
do not beat one pooled training curve
