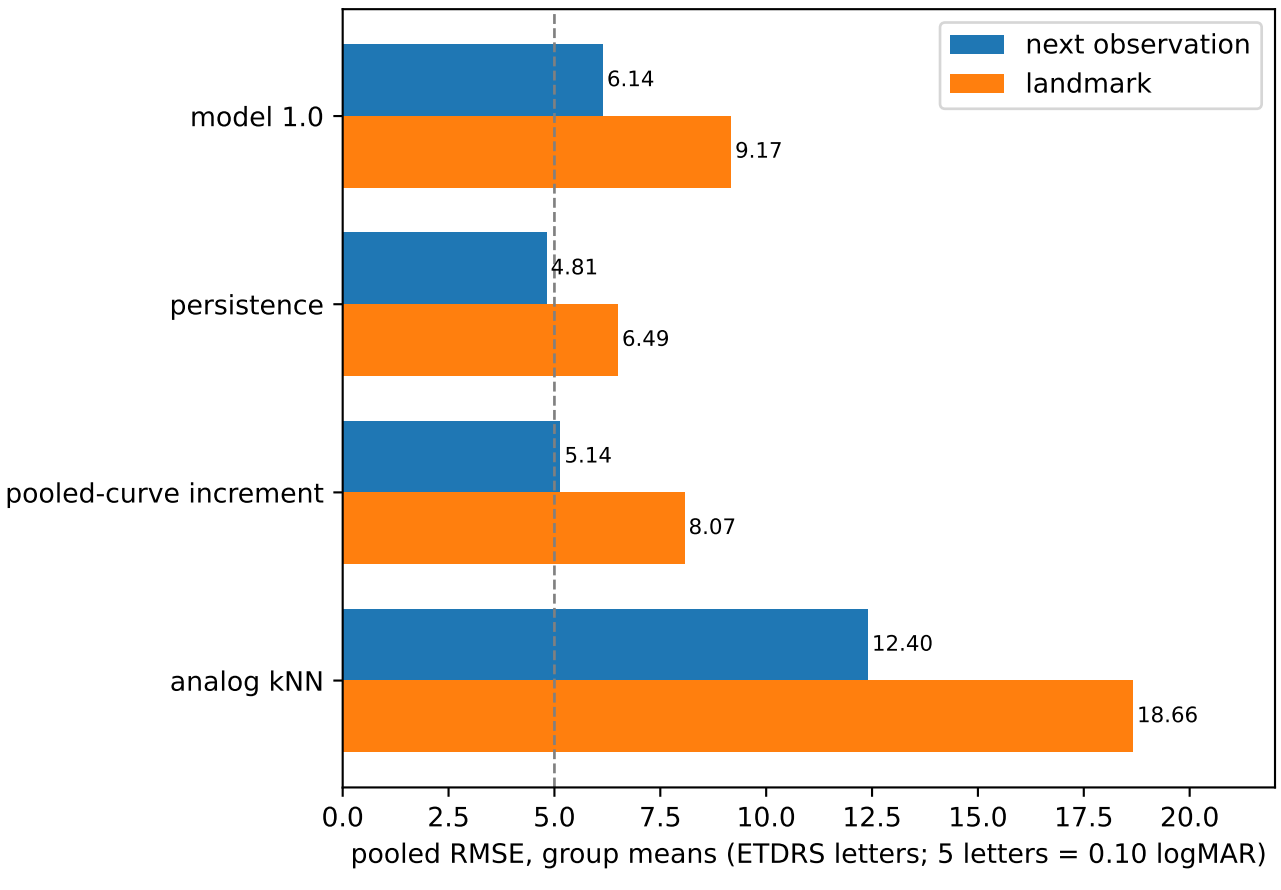
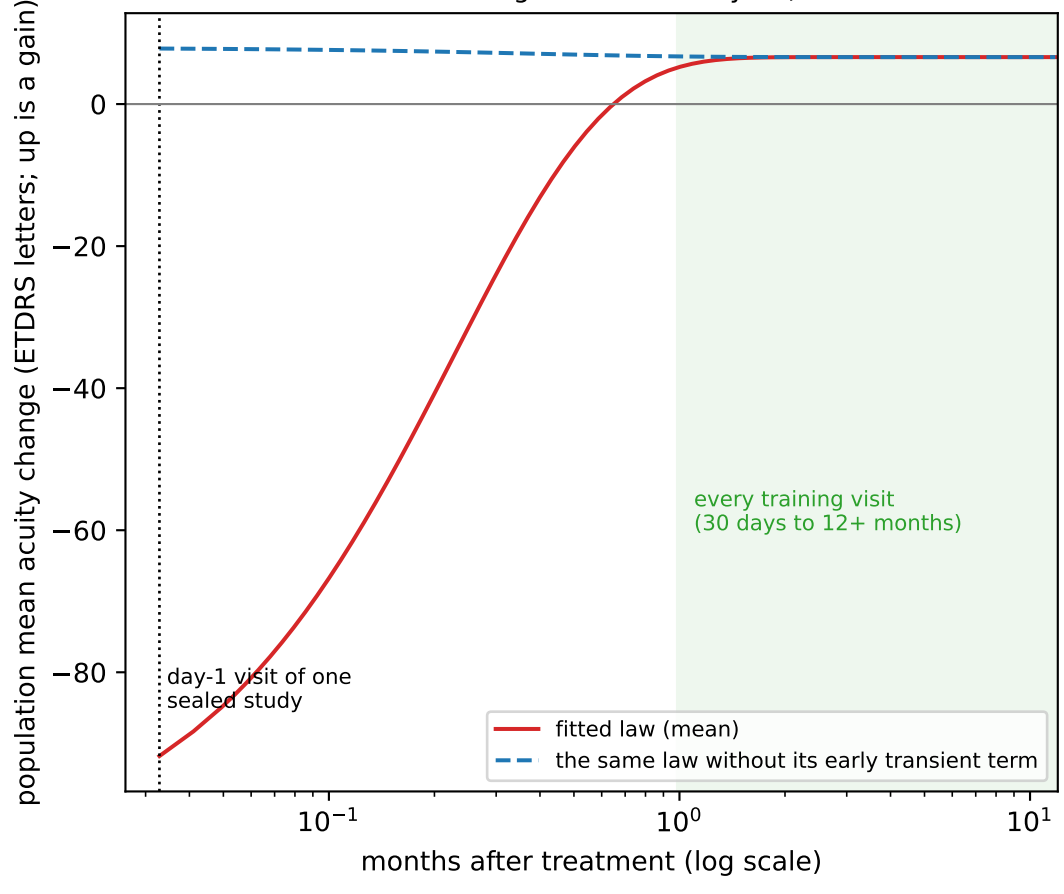
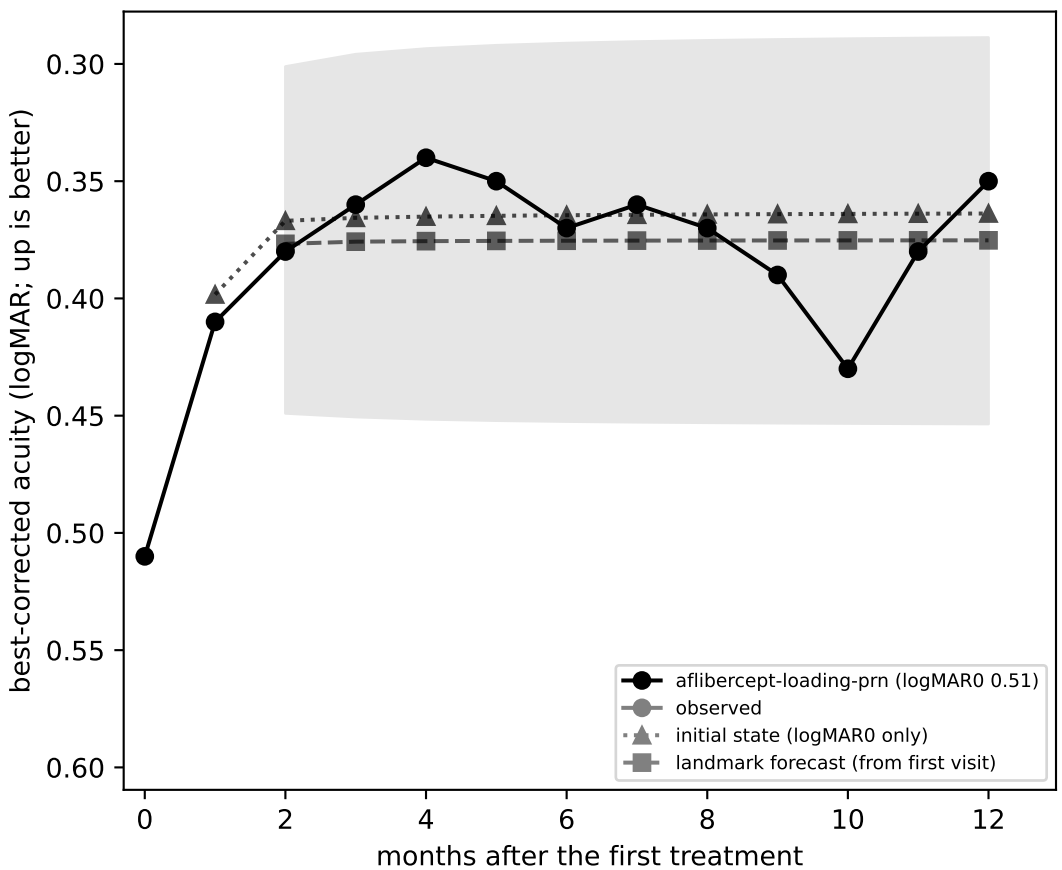
Sealed test: 11 group-mean series, all four checks fail
initial state 16.40 vs pooled training curve 5.18 letters; 80% coverage 0.68

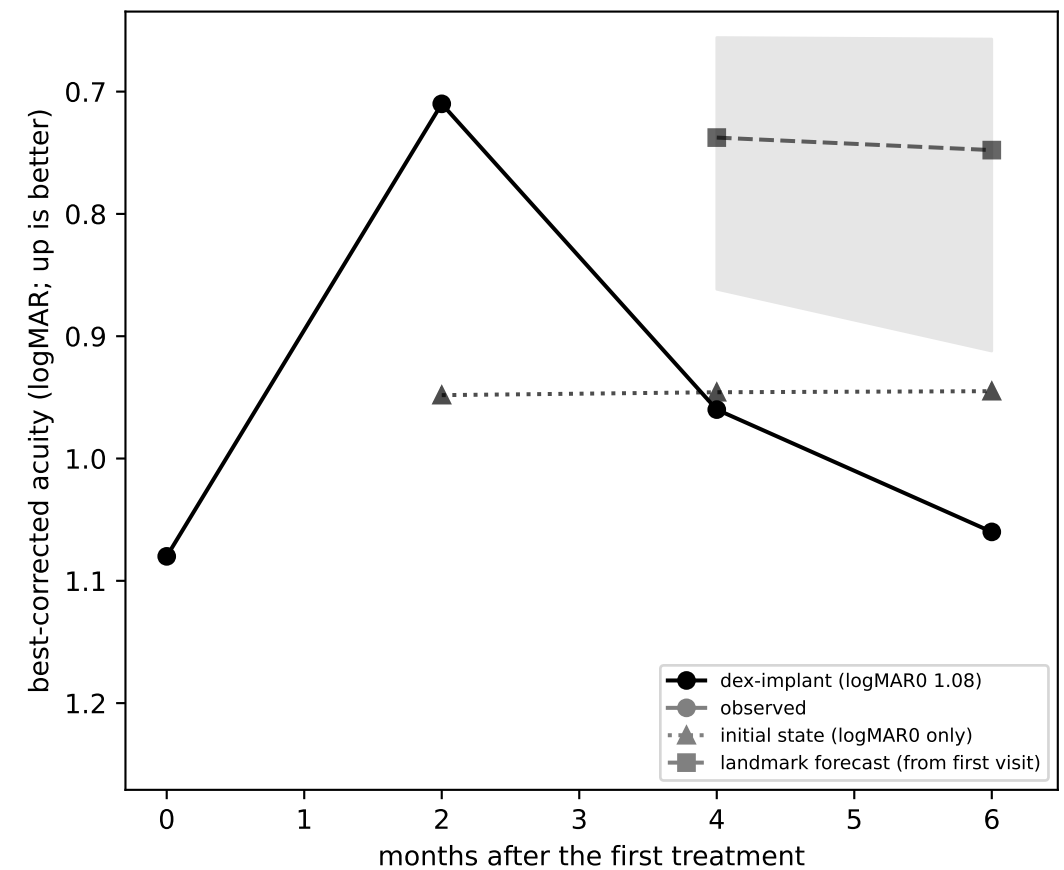


Root cause: the early transient was never constrained
(fitted transient +1.99 logMAR at day 1, a 100-letter loss;
no training visit before day 30)



DME, aflibercept: forecasts from the first visit hold
(shaded: 90% interval of the landmark forecast)





DME, dexamethasone implant: the gain wears off
(the law has no wear-off for acuity)
(shaded: 90% interval of the landmark forecast)
