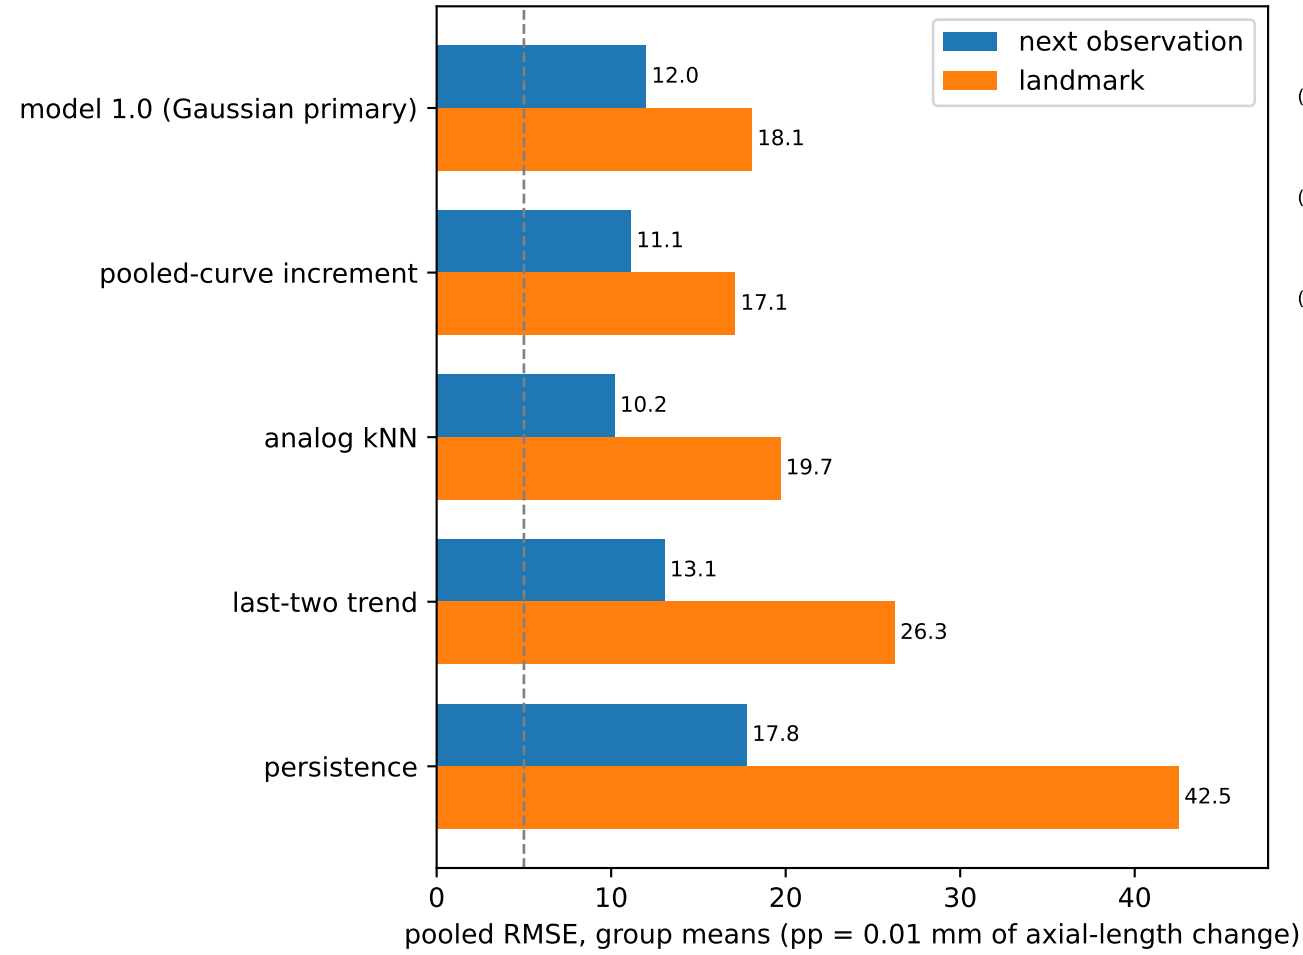
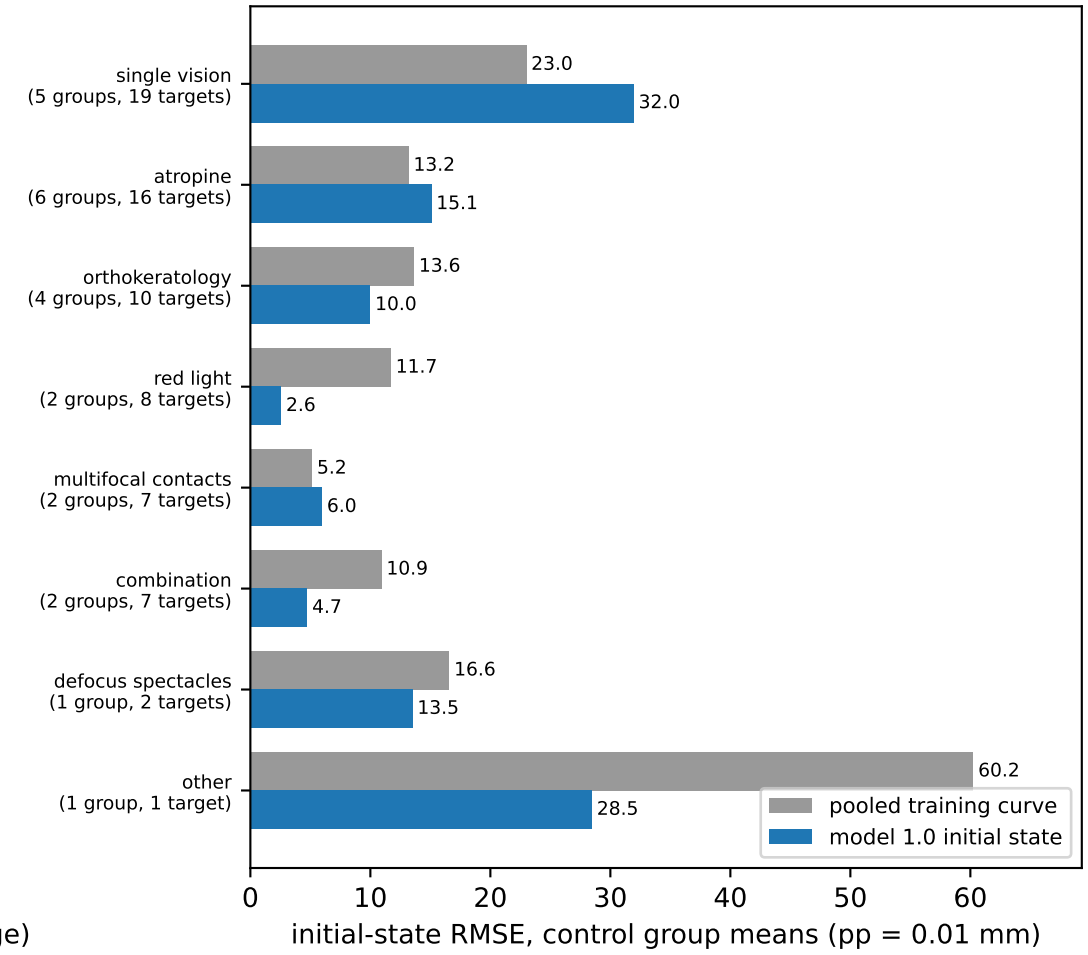
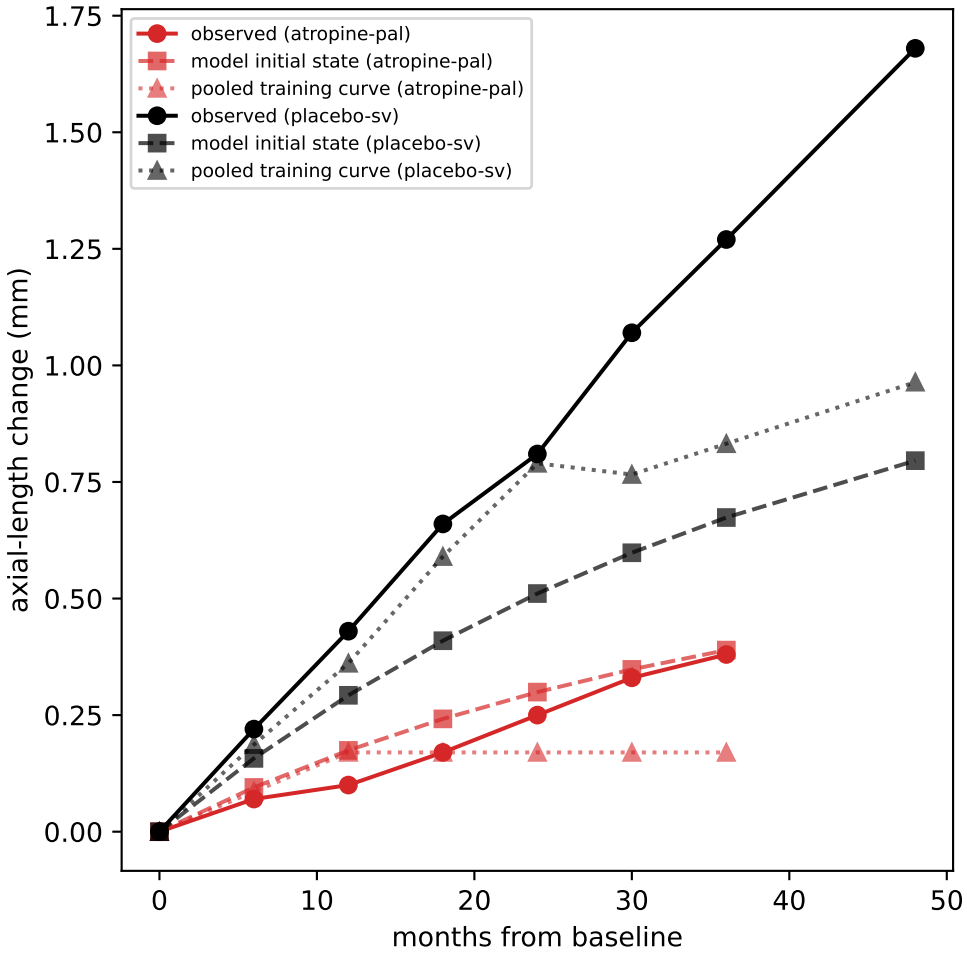
Sealed test, 18 group-mean forecast series:
H1, H2, H3, H4 fail (pooled-curve increment and kNN beat the model)

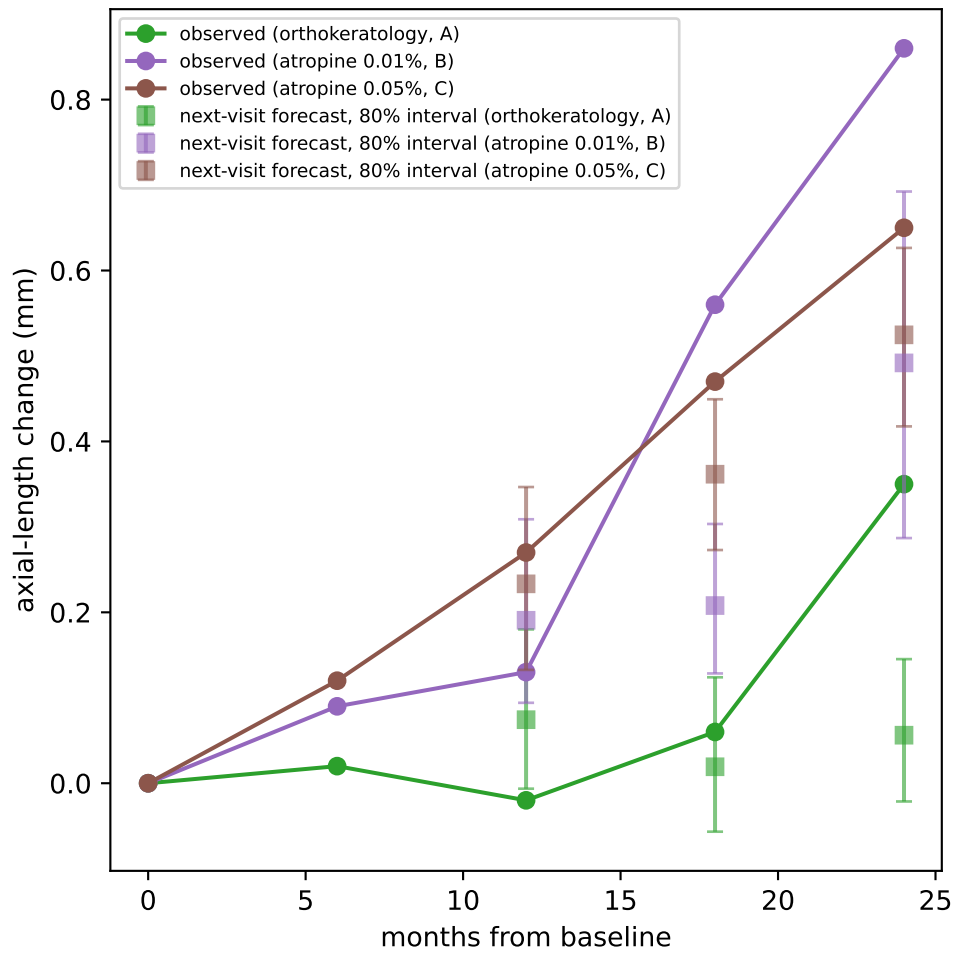


Initial state by treatment: better than the pooled curve for most treatments,
worse for single vision and atropine (H4 fails)



A 4-year trial (6990884): the control eyes grew 0.42 mm a year
throughout; the law levels off and few training visits lie after 2 years





A retrospective anisomyopia cohort (7447800; 18 and 13 of 36
atropine children left at month 24): second-year jumps outside the intervals
